

Interconexión de Redes

Proyecto Final: NRFU

Profesor:

Ramiro Alejandro Bermúdez U.

Michel Lujano A01636172

Cristopher Roman A01611408

Damian Reyes A01634031

Humberto Atondo A00959979

Nota: Ir a la carpeta de imágenes, para visualizar **todas** las comprobaciones.

Como parte del proyecto realizado para interconectar las redes de CDMX y GDL, partimos de la dirección de red **172.21.0.0/19** para organizar ambas redes.

De acuerdo al número de direcciones necesarias para cada una de las redes se decidió que el primer segmento de red, perteneciente a la red de Guadalajara, tendrá la dirección **172.21.0.0/18**, mientras que el segmento asignado a Ciudad de México estará albergado en la dirección **172.21.63.0/18**.

Con las direcciones asignadas, procedimos a su vez a segmentar estas direcciones de acuerdo a los requerimientos del cliente, las redes estarán direccionadas de la siguiente manera:

Guadalajara		172.21.0.0/18
Red	Dirección	Direcciones Disponibles
Wireless GDL	172.21.0.0/20	4096
Wireless Invitados	172.21.16.0/22	1024
IOT	172.21.20.0/23	512
Video Vigilancia	172.21.22.0/24	256
Iptel	172.21.23.0/25	128

Ciudad de México		172.21.64.0/18
Red	Dirección	Direcciones Disponibles
Wireless CDMX	172.21.64.0/20	4096
Wireless Invitados	172.21.80.0/22	1024
IOT	172.21.84.0/23	512
Video Vigilancia	172.21.86.0/24	256
Iptel	172.21.87.0/25	128

Adicionalmente se reservó una porción de direcciones en ambas redes, esto con el propósito de facilitar la futura expansión de las mismas, para la red de Guadalajara se utilizó la dirección **172.21.63.250/18** mientras que en la red de Ciudad de México se utilizó la dirección **172.21.127.250/1**.

Topología

Tanto los routers como los switches que conforman esta red cuentan con usuarios y contraseñas para acceder, dichas contraseñas se encuentran cifradas dentro de los dispositivos, en general está habilitado el uso de el protocolo cdp y lldp, pero, por seguridad, se encuentra deshabilitado en aquellos vlans en las que no es necesario tener estos protocolos activos.

Los dispositivos cuentan con un nombre para diferenciar a qué red pertenecen así como con un banner de inicio.

Access Lists

Las ACL que hemos configurado permiten a distintos usuarios acceder a la red y dependiendo de su departamento pueden ver documentos y utilizar distintos niveles de privilegios, además de que solamente se les permite acceder a la red dentro del horario de trabajo establecido por la compañía.

```
RT1-GDL#show access-lists
Standard IP access list 1
  10 permit 172.21.0.0, wildcard bits 0.0.15.255 (42 matches)
  20 permit 172.21.16.0, wildcard bits 0.0.3.255
Standard IP access list 2
  20 permit 10.40.72.64
  10 permit 10.40.72.60
  30 deny any log
Extended IP access list 100
  10 deny ip host 172.21.0.7 any time-range TIME-OficinasGDL (inactive)
  20 deny ip host 172.21.16.7 any time-range TIME-OficinasGDL (inactive)
  30 deny ip any any log (1 match)
Extended IP access list ACL_GDL
  10 permit tcp object-group VLANs-PERMIT any eq www
  20 permit tcp object-group VLANs-PERMIT any eq 22
  30 permit tcp object-group VLANs-PERMIT any eq domain
  40 permit tcp object-group VLANs-PERMIT any range ftp-data ftp
  50 permit ip any any (283 matches)
  60 deny tcp object-group VLANs-PERMIT any eq www time-range 03:00-07:00 (active)
  70 deny tcp object-group VLANs-PERMIT any eq 8080 time-range 03:00-07:00 (active)

(active)
```

Access lists activas en el router de Guadalajara

Loggin, Syslog

Se habilitó el login en los dispositivos a las direcciones **10.40.72.60** y **10.40.72.64**, en estas direcciones se recibirá una porción del syslog, para poder monitorear la actividad reciente dentro de los dispositivos

Syslog enviado a través de tftp

TFTP y Respaldo de configuraciones

Está habilitado el uso de tftp en los dispositivos, para comprobar su correcto funcionamiento se mandaron las configuraciones de los dispositivos a las direcciones **10.40.72.60** y **10.40.72.64**.

Las configuraciones están bajo los siguientes nombres:

- sw1-equip05
- rt1-equip05
- rt2-equip05
- sw-equip05

```

SSH

```
spanning-tree mode pvst
spanning-tree extend system-id
!
vlan internal allocation policy ascending
!
ip ssh version 2
```

El uso de SSH para establecer conexiones está permitido.

ssh activo en las configuraciones

```
interface FastEthernet0/6
description Iptel(CDMX)
switchport access vlan 6
switchport mode access
no cdp enable
no lldp transmit
no spanning-tree portfast
speed auto
duplex auto
switchport port-security
switchport port-security maximum 2
switchport port-security violation shutdown
mdix auto
```

Port Security

Se habilitó un protocolo de seguridad en algunas vlans, por ejemplo las Vlans iptel, con el fin de restringir el número máximo de direcciones que puede haber activos, en caso de que se sobrepase la cantidad de direcciones el puerto se apagará para evitar el acceso a través de él.

Port security activo en el puerto correspondiente al iptel

Clock

Los relojes de los dispositivos están sincronizados con el horario de verano de México, adicionalmente también se encuentran sincronizados mediante ntp con la dirección 10.40.72.254.

```
clock timezone mex -6
clock summer-time mex recurring

ntp clock-period 36029197
ntp server 10.40.72.254
```

Comandos activos de clock en los equipos

```
RT2-CDMX#show clock
*23:47:10.301 mex Sat May 23 2020
```
